

**SMALL
BUSINESS
PROGRAM**

THE SAN FRANCISCO-OAKLAND BAY BRIDGE SEISMIC SAFETY PROJECTS

SMALL BUSINESS OPPORTUNITIES

The Toll Bridge Small Business Team works directly with Prime Contractors to identify opportunities for small businesses to participate on this historic project.

SMALL BUSINESS OPPORTUNITIES

The Toll Bridge Program Small Business Team is partnering with the prime contractors during construction of the new Bay Bridge East Span to facilitate the participation of local Small Businesses and DVBEs in this historic project. Even though work on the East Span will be completed using several different construction contracts, the value of each contract is larger than the majority of public construction contracts in California. This provides an opportunity for the Toll Bridge Program to increase small business participation.

The Small Business Team is field-based and works directly with prime contractors, the Project Manager, Caltrans construction and construction support staff. Working with these different groups allows the Small Business Team to expedite the identification of potential opportunities for small businesses and quickly implement small business support services in its mission to increase small business participation during construction of the new East Span.

We work with prime contractors to identify small business opportunities, define relevant parameters, search databases and review other information in order to identify a pool of small businesses capable of performing identified work. One of our major activities is a Prime Contractor referral program in which the Small Business Team provides lists of small business contact information, compiled from historical small business participation information on completed Bay Bridge construction contracts, to prime contractors.

The Small Business Team distributes plans and specifications, and offers them for viewing in our field office. Small businesses that perform work on the Bay Bridge are provided support through the Technical Assistance program to improve their capacity for success.

Major contracts include:

- Self-Anchored Suspension Span
- Yerba Buena Island Transition Structure, Contract 1
- Oakland Touchdown, Contract 2 (upcoming)
- Yerba Buena Island Transition Structure, Contract 2 (upcoming)
